Heatmap

Description

Customizable calendar heatmaps for goal-setters and people developing new habits, through accountability and task tracking features, and streaks to encourage positive habit building.

Team Info

UI designer - Anthony

Frontend engineer - Anthony + John + Claude (CSS)

Backend engineer - John

Functional Requirements

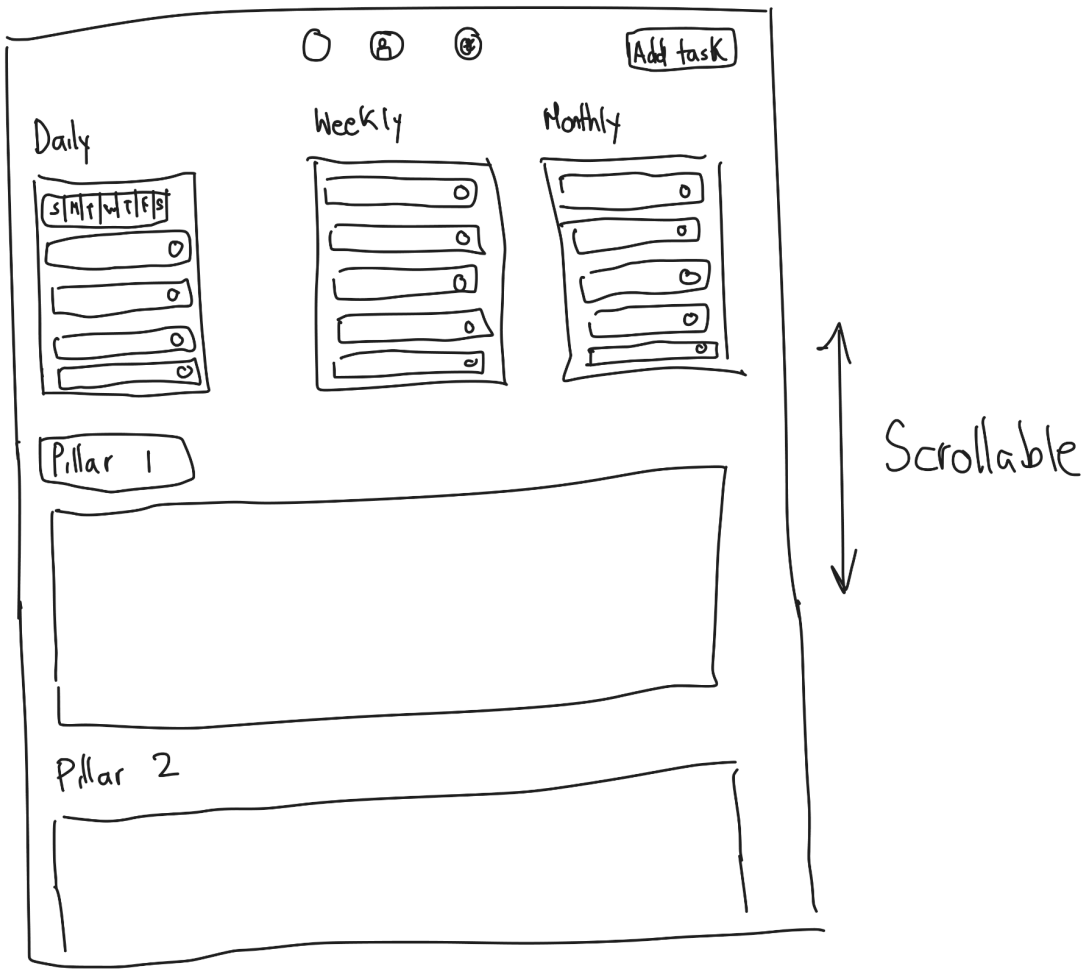

Major Features:

- Account creation
- Daily/weekly/monthly task creation
- Record tasks
- Mark tasks as complete
- Automatic incomplete if the task is not done
- To-do list view
- Heatmap
- Viewing a friend’s heatmap

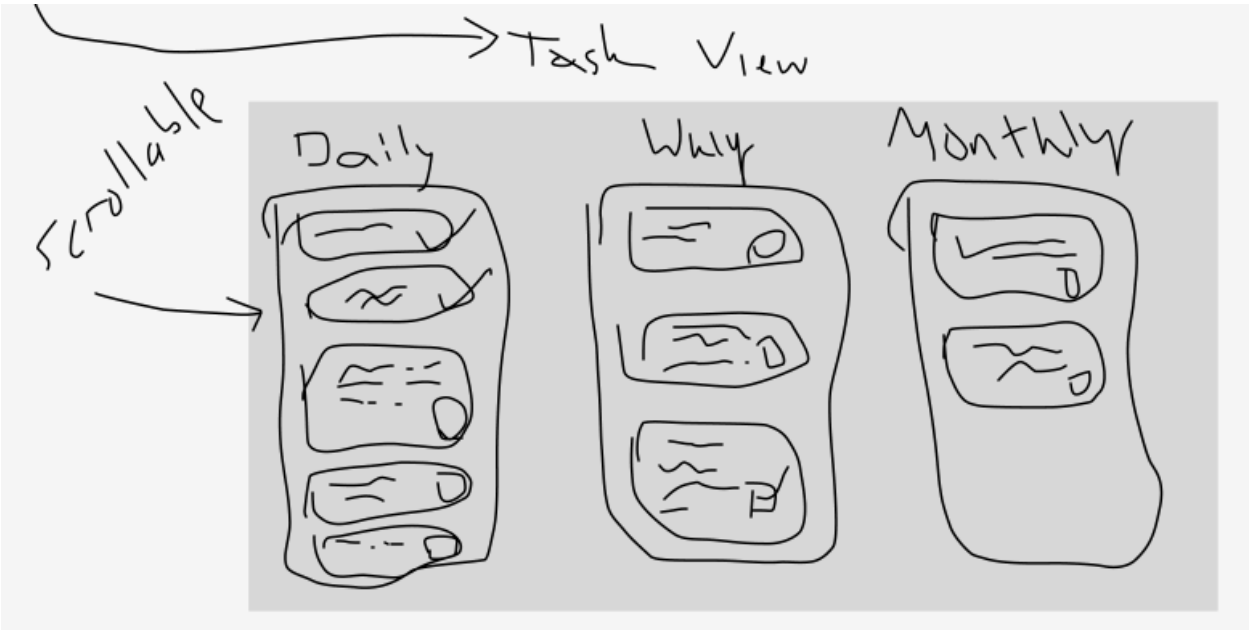

Minor Features:

- Analytics
- Customizable heatmaps (colors, etc)
- Celebrating milestones
- Streaks
- Reminders?
- Weekly report emailed to friend
- Weighted tasks based on urgency/importance

Low-fidelity Prototypes

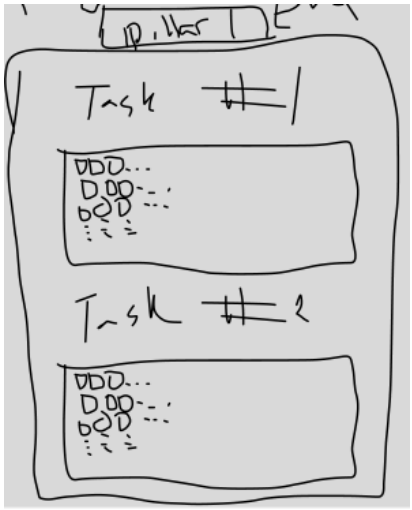

Case 1: View tasks / marking task as complete

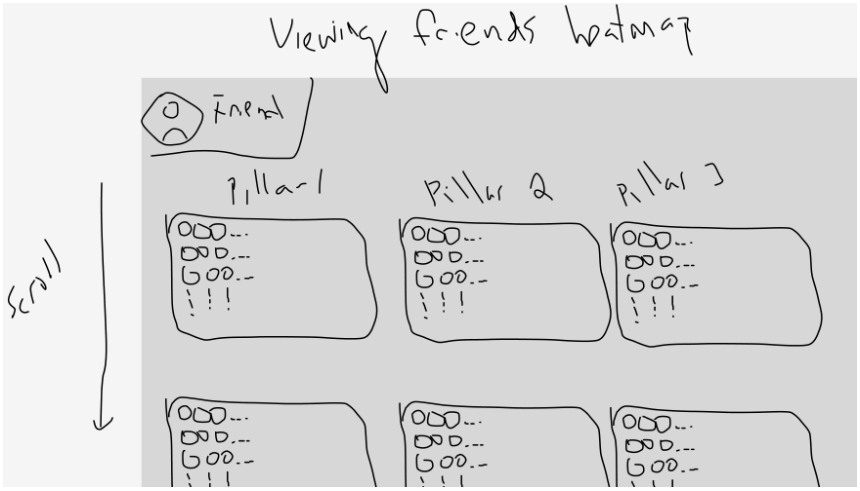

Case 2: Record a task

Case 3: Viewing Heatmap

Case 4: Viewing a friend’s heatmap

Software Architecture

- Frontend: forms, the to-do list, the heatmap grid, friend UI, instant UI updates, timezone/local date handling
- Backend: schema (profiles, habits, completions, friendships), RLS policies, SQL functions for the heatmap, to-do list, and streaks, optional pg_cron job
- Supabase API: Auth, table operations, rpc() calls, and optionally Realtime to update a friend's heatmap live
